The expression of our terroir of Pierrefeu-du-Var.  
Stone and fire: roundness and minerality

### In the vines

**Soils:** limestone, clay, and silt. The parcel sits high on the plain of Pierrefeu-du-Var, forming a small plateau that regulates the hygrometry of the soils and creates the balance necessary to produce good fruit. The soil is enriched with alluvial deposits carried from the nearby hills, and surface gravel reflects the light and retains heat to ensure homogenous ripening, whilst the influence of the sea tempers the effect of the hot southern climate.

**Grape varieties:** Grenache 40%, Cinsault 30%, Mourvèdre 20%, Syrah 10%. The Grenache is pruned late in the season to avoid vulnerability to frost (later ripening gives more balanced fruit for greater drinking pleasure).

**Cultivation method:** biodynamic. Biodynamic preparations (cow horn manure, silica, valerian...), light working of the soil, organic and green compost. Soft pruning respecting the flow of the sap. No herbicides or insecticides.

**Environment:** development of biodiversity by planting fig trees and installing beehives. The vineyard is bordered by two rivers and ancient woodland that create natural habitats. The entire estate offers a space of safe reproduction for rabbits, hares, and partridges, where hunting has been banished for over 10 years, and swallows' nests and bat colonies are actively encouraged and protected.

### In the cellar

**Harvest:** the grapes are picked at night to profit from the cooler temperatures and avoid oxidation of the fruit.

**Winemaking:** immediately pressed, fermented partly with wild yeasts

**Ageing:** short ageing on lees

### The wine
